

THERMAL MANAGEMENT SOLUTIONS

Hose assemblies, welded metal hose fabrications, and coupling systems engineered for demanding data center applications

Branch, Source, Blade, and Jumper Hose Assemblies

Our team works with leading hose and coupling manufacturers to design ready-to-install assemblies built to project specifications. Our in-house quality, testing, and cleaning programs help verify assembly integrity for critical cooling system installations.

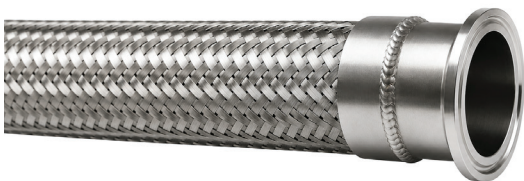

- UL94 V-0 and UL94 HB rated peroxide-cured EPDM
- Silicone and performance elastomeric tubing

Welded Metal Hose Fabrication Specialists

Our metal hose division designs, welds, tests, and finishes hose assemblies in-house, and produces welded pipe bends, transition pieces, and custom fabricated configurations.

Our ASME certified weld team, supported by our ISO 9001:2015 quality system, produces metal hose relied upon across industries.

Specialty Quick Coupling Systems

Authorized Source: Danfoss FD83 Series

Patented dual interlock safety design:

Integral valves cannot be opened until coupling halves are positively engaged, couplings cannot be disconnected until valves are closed.

Additional types include: UQD, UQDB, Blind Mate, LQC

Complete hose and piping solutions

- Sanitary Clamps, Elbows, and Adapters • Cam & Groove Couplings • Stainless Steel Pipe Couplings, Strainers and Valves
